

# PREVENT PROTECT PROSPER

## By leveraging the strength of its partners, Gavi, the Vaccine Alliance has clearly demonstrated that its achievements are greater than the sum of its individual parts.

This unique public-private partnership represents the strengths of all stakeholders in global immunisation: the leadership of implementing countries; the technical skills of UNICEF, WHO, the World Bank and research agencies; the research and production capabilities of vaccine manufacturers; the know-how and support of the private sector, donor governments and the Bill & Melinda Gates Foundation; plus the immunisation delivery and advocacy skills of civil society organisations around the world. Each Alliance partner brings their unique area of expertise to support Gavi's mission: saving children's lives and protecting people's health by increasing equitable use of vaccines.

Together we have helped save more than **10 million lives in 73 countries.**

Since Gavi's inception in 2000, protection against vaccine-preventable diseases has increased dramatically, thanks to our successful model for increasing access to this life-saving intervention. More children have been immunised with a wider range of vaccines than at any time in history and the Alliance is on the cusp of even greater impact in the coming strategic period.

## THE WORLD TODAY: GENERATION HEALTH 2020

**Now in its 20th year, Gavi, the Vaccine Alliance has helped countries immunise more than 700 million people, creating lifetime benefits for individuals, families and societies. Through this work, we've helped grow a healthy generation of children by giving them access to new and previously underused vaccines.**

Drawing on the individual strengths of its members, Gavi's model aggregates country demand, guarantees long-term predictable funding and brings down prices, helping to ensure that generations of children in poor countries do not miss out on life-saving, economy-boosting vaccines. It's this dynamic model that has helped reduce the cost of immunising a child with three critical life-saving childhood vaccines to less than US\$16, a more than 50% decrease in price since 2011.

At the same time, the organisation's dedication to novel solutions, including innovative finance, has helped accelerate access to vaccines as well as tackle persistent bottlenecks to immunisation like challenges to supply chain, data availability and demand generation. As a result, Gavi's work has helped implementing countries protect children against deadly and debilitating diseases. Its support for health systems and stock-piles has also bolstered global health security efforts to prevent and lessen the impact of epidemics around the world.

From measles, pneumococcal and rotavirus vaccines, which protect against major killers of children under five, to the human papillomavirus (HPV) vaccine against cervical cancer, millions of children now have access to critical vaccines that were once out of reach. Gavi has helped shrink the inequity in access to vaccines between low and high-income countries. As a result, global immunisation rates are at the highest levels in history.

# VISION FOR 2021-2025: PREVENT, PROTECT AND PROSPER

**Despite significant progress, persistent global inequities and dangerous outbreaks remind us every day that Gavi's work is as critical as ever.**

With bold commitments from donors, implementing countries and the private sector, the Alliance is poised to expand on its notable achievements. Through its innovative approach to development, the Alliance will help countries **prevent** disease with vaccines in order to **protect** the next generation and ensure countries can **prosper**.

## PREVENT

The Alliance will address inequities by providing the most complete package of protection and security ever to ensure vaccines work for everyone. Gavi's vaccine portfolio has grown significantly over time, from supporting 6 antigens in 2000, to 17 in 2018. Not only will the Alliance continue to protect children and adolescents from deadly disease, it will expand its work with mothers and a broader range of age groups, helping countries protect even more people with immunisation at every stage of life.

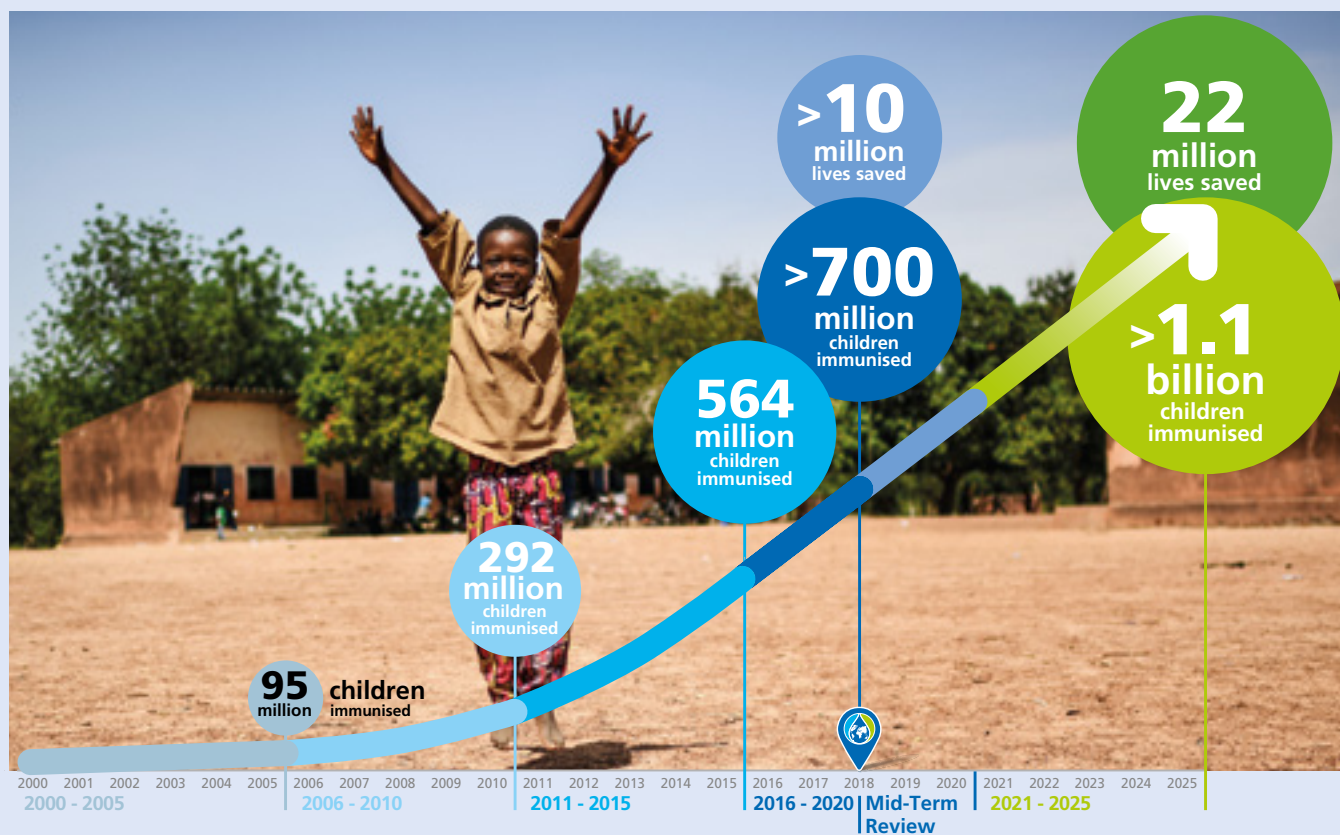

**By 2025, Gavi will have helped set countries on a path to save 22 million lives.**

## PROTECT

Gavi will continue its fight against epidemics and protect against outbreaks by expanding preventative use of vaccines for outbreak diseases as well as improving stockpiles. Gavi currently funds stockpiles of vaccines against such diseases as Ebola, yellow fever, cholera, meningitis and others. In a globalised world, the work on global health security does not just help protect Gavi-eligible countries, but all countries.

## PROSPER

The Alliance's work to protect people through disease prevention will ensure it continues to contribute to global prosperity. Empowering women through vaccines like HPV and rubella helps them become change agents to close the equity gap. And by increasing access to vaccines for the most vulnerable people, including underimmunised children and those who live in hard-to-reach communities, Gavi will help countries disrupt the vicious cycle of poverty. In time, healthier societies lead to healthier economies.

Gavi's innovative model will allow it to continue to take strong steps towards reaching the unreached in its next strategic period. Through strategic collaboration, the Alliance has the opportunity to be its boldest yet, with a responsibility to make the third Sustainable Development Goal ambition a reality.

The next five years are critical to ensure that Gavi achieves this ambition and makes vaccines work for all – a vision that benefits developed and developing countries alike.

Gavi's 2021-2025 investment opportunity to **prevent, protect and prosper**, will be unveiled on **August 30<sup>th</sup> in Yokohama, Japan**. Please join us to learn how Gavi's accomplishments can become an even greater success story and how you can play a part.
